## EDUCATION

### University of Waterloo

Bachelor of Software Engineering (Honours) – GPA: 3.94/4.00, AVG: 90.26%

Expected April 2028

Available May – August 2027

## EXPERIENCE

### Finta (YC W23)

Product / Software Engineering Intern

September 2026 – Present

San Francisco, CA

### Shopify

Software Engineering Intern

January 2026 – April 2026

Toronto, ON

- Cut team infrastructure spend by **50%** and on-call incidents by **15%** by replacing a legacy pipeline that precomputed report data with on-demand **ShopifyQL** queries across merchant-facing **React** pages
- Audited **10+ tables** for a **MySQL-to-YugabyteDB** migration, identifying a primary key that could overload one shard and case-sensitive matching changes that could alter query results across **60B+ rows**
- Fixed crashes on **3 React** reports affecting **150+ shops/day** via fallbacks for missing analytics access
- Identified a **Terraform**-induced **GCP** failure blocking new ETL jobs, averting days of stale merchant data
- Prototyped a **React/Vite** Slack triage tool estimated to save employees **30 min/day** and pitched to execs

### IdeaNotion Development Inc.

Software Developer Intern

May 2025 – August 2025

Markham, ON

- Built a **React**, **OpenAI**, and **.NET** summarizer that cut review time by **95%** across **4,500+** daily chats
- Rebuilt the chatbot agent config system in **React/Redux**, eliminating save errors for **150+** dealerships
- Resolved **35+** frontend bugs and **4** client support requests, driving an **18%** drop in reported issues
- Built **.NET** controllers to persist local user settings in **CosmosDB**, saving **400+** staff **1–2 mins per login**
- Built a **React** markdown editor for prompt authoring, cutting formatting time by **30%** for the AI team

### Food Banks Canada (via IdeaNotion)

Contract Developer

May 2025 – August 2025

Markham, ON

- Migrated **62** endpoints in **5 .NET** controllers from raw **SQL** to **EF Core**, enabling type-safe data access
- Built **15+** reusable ACF content blocks with PHP on **WordPress (Sage)** for English and French pages
- Updated **20+** pages to match **Figma** designs with responsive layouts, fixing broken sliders on **3** pages

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, C#, C++, C, Python, Ruby, SQL, HTML, CSS, SCSS, PHP

**Libraries:** React, Redux, Node.js, Express, .NET, Rails, Flask, Laravel, FastAPI, LangChain, GraphQL, Tailwind

**Tools:** Git, Azure, GCP, Docker, MySQL, PostgreSQL, MongoDB, BigQuery, WordPress, Figma, Flink, Three.js, Cursor, Claude Code, Codex, OpenCode, Pi Harness

## PROJECTS

### **LangSketch – Winner @ Hack the North** | *Electron, FastAPI, LangGraph, Databricks, Martian*

- Built an **Electron** app that compiles drag-and-drop LLM workflows into runnable **Python** agents
- Integrated an LLM router for cost-optimized model selection, cutting inference costs by up to **60%**

### **CodeSpeak** | *React, Tailwind, Flask, Express, Gemini API, Google TTS*

- Built a **React/Express** grid IDE for visually impaired users with **Gemini** assistance and voice interaction

### **BinThere.ai** | *React, Flask, Streamlit, YOLO, Roboflow, OpenAI API*

- Built a waste-sorting assistant using **YOLO/Roboflow** object detection and **OpenAI** disposal guidance
