Education

University of Waterloo — Expected April 2028
Bachelor of Software Engineering – 90.26% Average (3.94/4.00 GPA) — *Seeking Internships May – Aug 2027*

Experience

Finta (Backed by Y Combinator) — September 2026 – Present
Software Engineering Intern — *San Francisco, CA*

- Built a **Jev**-powered search tool allowing users to find transactions by describing them in plain English instead of selecting filters, returning results within **300ms** for every client, even at **1.1M+** transactions
- Sped up client onboarding ∼**30%** by cutting redundant **SQL** queries when auto-categorizing transactions
- Added column sorting to **5** financial reports in **React/TS/Rails**, taking at most **2s** for **300k+** line items
- Made filters **12x** faster for clients with **1M+** transactions by adding keyset pagination to **SQL** queries
- Diagnosed and fixed **8** failure modes that made an AI bookkeeping agent refuse or misread requests

Shopify — January 2026 – April 2026
Software Engineering Intern — *Toronto, ON*

- Cut team infrastructure spend by **50%** and on-call incidents by **15%** by replacing a legacy pipeline that precomputed merchants' marketing reports with **ShopifyQL** queries that run when each **React** page loads
- Audited **10+ SQL** tables for a **MySQL-to-YugabyteDB** migration, finding that it would silently change the results of text comparisons across **60B+** rows and that one table's data could pile up on a single server
- Diagnosed and fixed crashes on **3 React** reports affecting ∼**150** shops/day, adding regression tests
- Caught a **Terraform** change quietly blocking new **GCP** pipeline jobs, averting days of stale merchant data
- Co-built and pitched to execs an AI app turning Slack messages into to-dos, estimated to save **30 min/day**

IdeaNotion Development Inc. — May 2025 – August 2025
Software Developer Intern — *Markham, ON*

- Built **OpenAI** summaries of car buyers' chatbot threads, cutting review time from **6–10 min** to under **40s**
- Rebuilt the **React/Redux** pages where **150+** dealerships manage chatbot data, eliminating all save errors
- Saved **400+** dealership staff **1–2 min** per login by storing their local settings in **CosmosDB** with **.NET**
- Migrated **62** endpoints in Food Banks Canada's staff portal from raw **SQL** to type-safe **EF Core**
- Built a **React** markdown editor for writing chatbot skills, cutting formatting time by **30%** for the AI team
- Fixed **35+** frontend bugs and resolved **4** client support requests, helping cut reported issues by **18%**

Technical Skills

Languages: TypeScript, JavaScript, C#, C++, C, Python, Ruby, SQL, HTML, CSS, SCSS, PHP
Libraries: React, Redux, Node.js, Express, .NET, Rails, RubyLLM, Flask, FastAPI, LangChain, GraphQL, Tailwind
Tools: Git, Azure, GCP, Docker, MySQL, PostgreSQL, MongoDB, BigQuery, WordPress, Figma, Flink, Three.js

Projects

LangSketch – Winner @ Hack the North | *Electron, FastAPI, LangGraph, Databricks, Martian*

- Built an **Electron** app that compiles drag-and-drop flowcharts into runnable **Python** AI agents
- Integrated an LLM router for cost-optimized model selection, cutting inference costs by up to **60%**

CodeSpeak | *React, Tailwind, Flask, Express, Gemini API, Google TTS*

- Built a **React/Express** grid IDE for visually impaired users with **Gemini** assistance and voice interaction
